

Our focused Data center services will ensure that our customers get the best in term of solutions & delivery via the following services

- A. Datacenter Assessment & Gap Analysis
- B. Design Service
- C. Project Management Service
- D. Data Center Pre Certification Service
- E. Data Center Commissioning Service

A. Assessment& gap analysis

a. DC Assessment Service

Enjoy benefits of un matched detailing to identify & mitigate Technical risks.

We provide consulting & engineering services for all phases of data center life cycle”

We assess clients business requirements & determine if their current assets will continue to meet short-term and long-term business requirements. We assess environmental, mechanical, structural, electrical, telecom, and zoning factors.

Special tools will be used if required to assess the facility conditions & out u will be a technical report on the feasibility of the facility for the business requirement.

Assessment services provide customer with a comprehensive, adaptive, facility-based, and fully integrated data through the fusion of technology, infrastructure, and operational expertise.

b. DC Gap Analysis

Long term & short term customer business requirements are conceptualized to understand the asset gap in the organization and ways & means of meeting the gaps are proposed to the customer

DC Gap Analysis services provide customer with a clear understanding of actionable & options available to bridge the gap with budget costing for business decision making.

B. Design Service

a. Conceptual Design Service

Our conceptual design process provides understanding of possibilities through our passion for innovation.

Long term & short term customer business requirements are conceptualized to

understand the asset gap in the organization and ways & means of meeting the gaps are

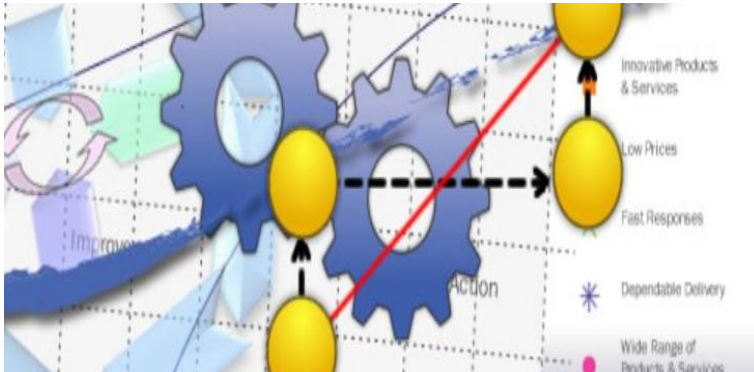

proposed to the customer. The customer is provided with solutions based on the best practices in the industry. Scalability, redundancy resilience & tier categorization, are major factors. Customer gets a set of optimum business solutions in alignment with the business goals.

Be assured about the most optimum business Tier IV design with us

b. Detailed Design Service

Once the customer selects the conceptual design, the services are detailed to the finest level in accordance with local standards of each services. Our own building solutions team add immense value to the services.

Our experienced design engineers in various trades will work to the details of equipment sizing, selection, & construction drawings, where the implementation team takes the baton.

Project Management Services

Complete the full scope of data center projects with in schedule time & cost

Experience the professional project management expertise with us. As in any project, the data center should also follow the professional project management methodologies for meeting the project deliverable in time, cost & scope. Our experts ensure that the project is on track with time tested project

management techniques customized to the specific project requirements.

Our project management services eases the customer though out the project life cycle in all knowledge areas as per the PMBOK. Some of the tailor made PM solutions are

- ❖ Managing complex projects with optimal Cost, Time & Scope
- ❖ Developing project managers & critical staff
- ❖ Setting up & operating of PMO for Clients
- ❖ Managing secured PMIS for Clients
- ❖ Project Quality Assurance & Quality Control
- ❖ Project Managers for hire

C. Data Center Pre Certification Service

High availability data centre is to be certified for the design intent by a competent authority we have the capability to do the certification. Before offering any facility or design to the certifying agencies it would be prudent to get it pre certified by our qualified and experienced resources ensure valuable time and cost savings.

Common pitfalls in the design is rightly identified by our team which not only save time and costing on the certification process but also on the configuration of systems in datacenter ultimately right manpower at right time ensure Quality of services

These Unique services are our specialty. Our UPTIME certified resources will proactively review related project documents & advise as appropriate to ensure certification is smooth.

DC Pre certification service ensure that certification prerequisites will be met before the documents/ facility is offered for certification agency. This service saves huge time & resources for the end customer. This service is a major differentiator in the market.

D. Data Center Commissioning Service

A relatively new term in Indian DC industry. In the pursuit of “

cost effectiveness” the commissioning of the systems are entrusted to the OEMs & vendors. Note that every OEM & vendor have their own limitations in skill sets, necessitating a specialized commissioning specialist.

Best practices are to entrust the task to a specialized commissioning agency, who will work with vendors & designers to develop and implement a commissioning plan to ensure the design points are tested without any compromise.

A data center stands apart from normal facility in terms of such dedicated care in each activity
