

## DC Operations services

Best practices are good to talk, better to implement. In critical facilities, Lethargy in this matter are catastrophic. Outages are manmade, lack of managerial frame work to ensure best practices are also humane error. Our service make the difference here.

Our quality cautious uncompromising leadership, with specially designed procedures & best practices as per uptime operational sustainability standards, will ensure that proactive operations & maintenance procedures are practiced in facilities

**Following DC Operations & maintenance services ensure that the always on enterprise is implemented in facility that will be easy for the Uptime operational sustainability certification. This service is a major differentiator in the market.**

- **Operational strategy & Best practice consulting**

Several data centres owners operate data centres by themselves. The competencies in implementing best practices in the datacenter is limited in these cases. Our data centre operations consulting service will identify possible gaps in best practices so that the datacenter can achieve the design objectives of Energy Efficiency and Availability.

It is to be noted that even though the design and construct facilities are not certified still The facility can apply for operational certification from uptime Institute, in case the operations are done as per operational sustainability standards of Hudson Institute

This certificate is having tremendous value in the market and owners can have exceptional advantages compared to their competitors in the industry

This certification implies that the facility is certified as one of the best data centres in the world. take advantage of this service and get local competitive advantage over your competitors

We are the unique agency to do this work in India. We are specialised in providing consulting for the data centre from the AS IS state to the required state in data centre operations certification.

- **Operational Documentation**

Data centre operation documentation choose an enormous for an ordinary organisation to take care. the criticality and uniqueness of data centre operations makes it more complex for an ordinary DC manager to manage.

our Uptime certified specialised resources will make this task easier for you so that the best of the system implemented in your premise for your customer

- **Operate & Manage Data center**

Operating and managing a data centre a specialised classic task. It needs variety of skills like client facing, vendor management , technology management, crisis management, documentation, process development etc..

it needs man management, mission management and equipment management to obtain the desired Tier objectives and Energy Management targets.

All process in data centre operations and maintenance should be qualified for the rigorous test of Proactive, practice and informed.

Variety of services including training services, assessment services, consulting services documentation services etc.. are put in for implementing best practice in every technology and process .

we are the only agency in India with focused integrated approach in data center operations

- **O&M Pre certification service**

The most strict requirement in data centre operation is Uptime certification for operational sustainability. This is a major task and the skill required for the certification in the market is very less. This lack of skills was bottleneck in achieving the certificate and objectives.

With these services we ensure that the operation and maintenance in the datacenter is implemented completely in accordance with the requirement of uptime sustainability standard requirement

In short state of art technology employees state of art operation of passengers and the best practices compromise in any sense can results in failures & loss of reputation.

Instead, take advantage of market Supremacy in your industry by ensuring best practices for data centre.

Entrust this task to you are qualified operations partner
